Prolog
Convert to kernel Prolog (Chapter 3)
standard form transformation
head unraveling
arithmetic transformation
cut transformation
flattening
Kernel Prolog (Chapter 3)
Kernel Prolog transformations (Chapter 4)
formula manipulation
factoring
dataflow analysis
determinism transformation
symbolic execution
entry specialization
uninitialized register conversion
type updating
head unraveling
head-body segmentation
type enrichment
goal reordering
determinism extraction
Optimized kernel Prolog
Kernel to BAM compilation (Chapter 5)
predicate compiler
clause compiler
disjunction compiler
determinism compiler
entry specialization
write-once transformation
dereference chain transformation
unification compiler
goal compiler
register allocator
BAM code (Chapter 3)
BAM transformations (Chapter 6)
duplicate code elimination
dead code elimination
jump elimination
label elimination
synonym optimization
peephole optimization
determinism optimization
Optimized BAM code
